add a new limitation reading -- a network interface configured to provide information to

the terminal via a network in accordance with a request received from the terminal; --.

In line 6, add --at the information service apparatus-- between --panel-- and --

configured--.

5.   In claim 9, line 2, delete --connected to said information service apparatus

Change(s) applied to document, through a network in accordance with a request sent from said terminal--. Between

/A.C./ lines 7 and 8 add a new limitation reading -- receiving a request from the terminal

3/10/2011 connected to the information service apparatus through a network; --.

Allowable Subject Matter

6.   Claims 1-6, and 8-14 are allowed. The following is an examiner's statement of

reasons for allowance:

7.   Consider claim 1, the prior art of record, specifically Heiny and Seilder, do not

specifically teach alone or in combination the limitations of "when said language

correspondence judgment part determines that said information in the language

designated by said discrimination information cannot be provided, said language

determination part acquires language data corresponding to the language selected by

the selection received at said interface and currently used for displaying said operation

information on said operation panel and selects said acquired language data as

language data of said language used for providing said information" where the terminal
